

Parental Monitoring Tools in the Netherlands

The aim of this research is to observe the monitoring habits of parents on their children's mobile devices. This will contain information regarding what applications parents use to monitor their child's online activity, how much time is spent on a given application, and what websites their child visits and monitor calls/messages. Collecting such data will be done by the means of anonymous surveys and conducting online interviews. During the surveys, the participants will be asked questions regarding how they monitor their children, what applications they use to do so, what concerns they have about their child's online activities, and what information they might be interested in viewing (e.g. screen time, messages, calls). You can fill in the form here:

<https://forms.gle/Diy5SN68e3L3Gzws5>

Using the information from the surveys a prototype will be developed and tested. You can participate in an **interview** and give your opinion on the application. The interview will take about an hour and will be between **June 11th and June 19th**. You can register here:
